

KV-8AD12

RM-793

SERVICE MANUAL

US Model
Chassis No. SCC-E73C-A

This service manual is only for a kitchen holder of KV-8AD12. In case of repair of a TV set itself, Please use the service manual for KV-8AD11/8AD14.

MODELS OF THE SAME SERIES	
KV-8AD12	
KV-8AD11/8AD14	

SPECIFICATIONS

Television system	American TV standard, NTSC color	Power requirements	120 V AC, 60 Hz
Channel coverage	VHF channels 2 – 13 UHF channels 14 – 69 CATV channels 1 – 125 (181 total receivable channels)	Power consumption	12/24 V DC AC IN: 41 W max. DC IN: 32 W max.
Picture tube	Trinitron tube 8-inch picture measured diagonally 9-inch picture tube measured diagonally 70-degree deflection	Dimensions	Approx. 239 x 197 x 310 mm (w/h/d) (9 1/2 x 7 7/8 x 12 1/4 inches)
Antenna	VHF/UHF telescopic antenna	Weight	Approx. 5.0 kg (11 lb)
Speaker	77mm round (3 1/8 inches)	Supplied accessories	Remote Commander RM-793 (1) with 2 size AA (R6) batteries AC power cord (1) Telescopic antenna (1) Car battery cord DCC-17AW (1) Brackets for shelf installation (2) M6 x 35 bolts (4) M6 nuts (4)
Inputs	VIDEO IN jacks VIDEO: RCA phono-type 1 Vp-p, 75 ohms AUDIO: RCA phono-type monaural	Optional accessories	Connecting cord VMC-920MS
Output	EXT ANT (Combined CATV/VHF/UHF 75-ohm, F-type) Earphone jack VIDEO OUT jacks VIDEO: RCA phono-type AUDIO: RCA phono-type monaural		

Design and specifications are subject to change without notice.

TRINITRON® COLOR TV

SONY®

1. GENERAL

Preparing for Use

You can install the TV to a kitchen shelf or cabinet by attaching the shelf installation brackets (supplied) as shown below.

Attaching the TV to a kitchen cabinet

1 Lay the supplied paper pattern on the base of the cabinet (inside or outside), to ensure the proper 135 mm (5½ inches) distance between the wall and the bracket. Drill 4 holes where indicated on the pattern. Attach the shelf installation bracket with the 4 nuts and bolts (supplied) as shown.

2 Before installing the TV, first attach the cord bracket as shown below.

The cord bracket is used to store excess length of power cord. Holding the cord bracket as shown, push the right side so that the bracket tabs snap into the correct air vent openings on the right rear of the TV; then slide the bracket to the right. Next, push the left side of the bracket so that the left-side tabs snap into the air vent openings on the left.

(Rear of TV)

To remove the cord bracket, first pull the left side of the bracket away from the TV. Slide the right side of the bracket to the left; then pull to remove it.

3 Wrap any excess length of power cord around the cord bracket. When using the TV in a kitchen, do not let the cord hang loose, to avoid dangerous contact with heat and fire.

(Rear of TV)

Preparing for Use

- 4** Connect the supplied telescopic antenna by inserting the antenna base into the bottom of the receptacle on the cord bracket. Twist to ensure a secure fit.

- 5** Attach the antenna connector to the EXT ANT terminal.

- 6** To attach the TV to the shelf installation bracket, insert the bracket base into the two shelf bracket slots on the TV, pushing until completely inserted.

When you want to detach the TV, pull it toward you to remove the TV from the bracket.

- 7** After installation, the TV can be swiveled 40° in either direction.

The TV will be tilted back slightly, at the same angle as when set on a flat surface, for optimum viewing angle.

CAUTION
To reduce the risk of fire, do not place any heating or cooking appliance beneath the TV.

CAUTION

SHORT CIRCUIT THE ANODE OF THE PICTURE TUBE AND THE ANODE CAP TO THE METAL CHASSIS, CRT SHIELD, OR CARBON PAINTED ON THE CRT, AFTER REMOVING THE ANODE.

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY. CIRCUIT ADJUSTMENTS THAT ARE CRITICAL TO SAFE OPERATION ARE IDENTIFIED IN THIS MANUAL. FOLLOW THESE PROCEDURES WHENEVER CRITICAL COMPONENTS ARE REPLACED OR IMPROPER OPERATION IS SUSPECTED.

ATTENTION

APRES AVOIR DECONNECTE LE CAP DE L'ANODE, COURT-CIRCUITER L'ANODE DU TUBE CATHODIQUE ET CELUI DE L'ANODE DU CAP AU CHASSIS METALLIQUE DE L'APPAREIL, OU AU COUCHE DE CARBONE PEINTE SUR LE TUBE CATHODIQUE OU AU BLINDAGE DU TUBE CATHODIQUE.

ATTENTION AUX COMPOSANTS RELATIFS À LA SÉCURITÉ!!

LES COMPOSANTS IDENTIFIÉS PAR UNE TRAME ET PAR UNE MARQUE  SUR LES SCHÉMAS DE PRINCIPE, LES VUES EXPLOSÉES ET LES LISTES DE PIÉCES SONT D'UNE IMPORTANCE CRITIQUE POUR LA SÉCURITÉ DU FONCTIONNEMENT. NE LES REMPLACER QUE PAR DES COMPOSANTS SONY DONT LE NUMÉRO DE PIÉCE EST INDIQUÉ DANS LE PRÉSENT MANUEL OU DANS DES SUPPLÉMENTS PUBLIÉS PAR SONY. LES RÉGLAGES DE CIRCUIT DONT L'IMPORTANCE EST CRITIQUE POUR LA SÉCURITÉ DU FONCTIONNEMENT SONT IDENTIFIÉS DANS LE PRÉSENT MANUEL. SUIVRE CES PROCÉDURES LORS DE CHAQUE REMPLACEMENT DE COMPOSANTS CRITIQUES, OU LORSQU'UN MAUVAIS FONCTIONNEMENT EST SUSPECTÉ.

SAFETY CHECK-OUT (US Model Only)

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
3. Check that all control knobs, shields, covers, ground straps, and mounting hardware have been replaced. Be absolutely certain that you have replaced all the insulators.
4. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
5. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
6. Check the line cord for cracks and abrasion. Recommend the replacement of any such line cord to the customer.
7. Check the condition of the monopole antenna (if any).
Make sure the end is not broken off, and has the plastic cap on it. Point out the danger of impalement on a broken antenna to the customer, and recommend the antenna's replacement.
8. Check the B+ and HV to see they are at the values specified. Make sure your instruments are accurate; be suspicious of your HV meter if sets always have low HV.
9. Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

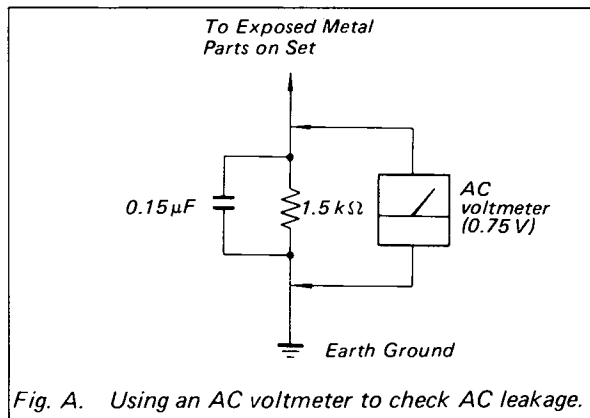

Fig. A. Using an AC voltmeter to check AC leakage.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

HOW TO FIND A GOOD EARTH GROUND

A cold-water pipe is guaranteed earth ground; the cover-plate retaining screw on most AC outlet boxes is also at earth ground. If the retaining screw is to be used as your earth-ground, verify that it is at ground by measuring the resistance between it and a cold-water pipe with an ohmmeter. The reading should be zero ohms. If a cold-water pipe is not accessible, connect a 60-100 watts trouble light (not a neon lamp) between the hot side of the receptacle and the retaining screw. Try both slots, if necessary, to locate the hot side of the line, the lamp should light at normal brilliance if the screw is at ground potential. (See Fig. B)

Fig. B. Checking for earth ground.

SECTION 1 GENERAL

1-1. IDENTIFYING THE PARTS

Front

Rear

Left side

1-2. PREPARING FOR USE

Remote commander

RM-792 (KV-8AD11)
RM-793 (KV-8AD14)

Using house current

Connecting the supplied telescopic antenna

1 Insert the antenna into the receptacle on the TV, and twist to ensure a secure fit.

2 Attach the antenna connector to the EXT ANT terminal.

Installing batteries

1 Remove the battery compartment cover.

2 Insert two size AA (R6) batteries in correct polarity; then replace the lid.

Notes

- In normal operation, batteries will last up to half a year. If the TV does not operate properly, the batteries might be exhausted. Replace all with new ones.
- To avoid damage from possible battery leakage, remove the batteries for extended unused periods.
- Be sure that there are no obstructions between the Remote Commander and the TV.
- Operable range is limited.
- If a Remote Commander not recommended is used to operate this TV, or if the supplied Remote Commander is used to operate another TV, the TV may not operate properly.

We recommend connecting VHF/UHF antennas for better picture quality. You can receive cable TV by connecting a cable supplied by your local cable company.

Prepare the antenna end according to your cable type.

Using a VHF, UHF or combination VHF/UHF antenna, or CATV cable

75-ohm coaxial cable (round)

Attach an optional F-type connector

(Rear of TV)

EXT ANT

Connecting both VHF and UHF antennas

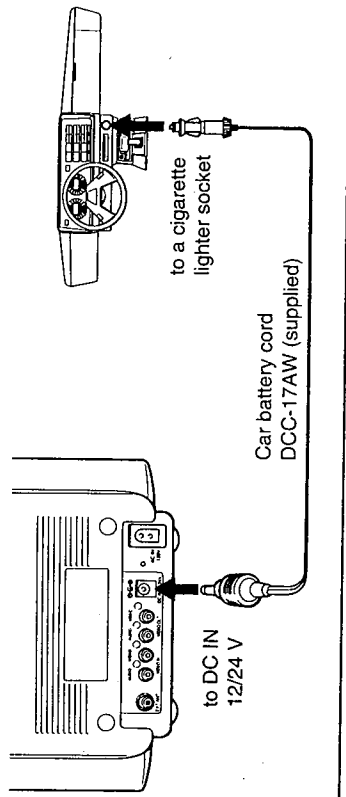

Use the EAC-66 U/V mixer (not supplied).

- 1 Remove the telescopic antenna from the EXT ANT terminal on the TV.
- 2 Prepare the antenna end using the appropriate connector (see the illustration above), and connect the antenna to EXT ANT.

When you use the U/V mixer
Visual and audio interference may occur in the cable TV channels over 37 (W+1).

Using a car battery

Notes

- For car use, the TV is designed for negative ground 12/24 V DC operation only.
- Use only the supplied car battery cord manufactured by Sony. Polarity of the plugs of other manufacturers may be different.
- When you aren't using the TV, remove the car battery cord from the cigarette lighter socket.

Polarity of the Sony plug

Presetting TV Channels

Presetting TV channels automatically

1 Press POWER on the TV or the Remote Commander to turn the TV on.

or

2 Press TVVIDEO on the TV or the Remote Commander so that the TV mode appears.

If "VIDEO" is displayed on the screen, press TVVIDEO on the TV or the Remote Commander again so that a channel number appears.

3 Press AUTO PGM.

"AUTO PROGRAM" is displayed on the screen and receivable channels (other than the channels already preset) will be preset in numerical sequence. The channels previously preset remain in the TV's memory.

When no more channels can be found, the programming stops and the lowest numbered channel is displayed.

Channels that can be received on this TV:

VHF: 2 - 13

UHF: 14 - 69

Cable: 1 - 125

To check preset channels

Press CH +/- on the TV or the Remote Commander.

Presetting only desired channels or erasing unnecessary channels

1 Set the SEEK/DIRECT selector to DIRECT.

2 To select a channel, press the 0-9 buttons (to add channels) or CHANNEL +/- (CH +/-) (to erase channels), then press ENTER.

3 Press ADD to add channels.

A "+" appears before the number for a moment. This channel has now been added to the channel scan memory.

Press ERASE to erase channels.

A "-" appears before the number for a moment. This channel has now been erased from the channel scan memory. The next time you press the CH +/- buttons, this channel will be skipped.

Repeat steps 1 and 2 to add or erase other channels.

1-3. WATCHING TV PROGRAMS

1 Press **POWER** on the TV or the Remote Commander to turn the TV on.

Note
The first time you use the TV, press **POWER** on the TV to turn the power on.

2 Press the **TV/VIDEO** button on the TV or the Remote Commander to select TV mode. (TV and VIDEO modes are selected in sequence.)

3 Set the **SEEK/DIRECT** selector to choose the method you prefer for selecting channels.

SEEK mode
Press **CHANNEL +/-** on the TV, or **CH +/-** on the Remote Commander to select receivable channels only. (You can also select channels using the 0 - 9 buttons.) Use **SEEK** mode to improve channel reception while viewing your TV in a car.

DIRECT mode
Press the 0 - 9 buttons on the Remote Commander to select a channel directly. (When you press **CHANNEL +/-** or **CH +/-**, non-receiving channels will also be selected.)

4 Press **CHANNEL +/-** on the TV, or press **CH +/-** or 0 - 9 buttons on the Remote Commander to select the channel you want to watch.

5 Press **VOLUME +/-** on the TV or **VOL +/-** on the Remote Commander to adjust the volume.

To watch cable TV channels
Press **CABLE** (the "C" display will appear) and select channels directly. When you want to watch VHF/UHF channels, press **CABLE** again so that the "C" display disappears.

To turn the TV off.
Press **POWER** on the TV or on the Remote Commander.

Note
When you erase a VHF or UHF channel, the cable TV channel with the same number is also erased, and vice versa.

Cable TV channel chart*
Cable TV systems use letters or numbers to designate channels. To tune in a channel, refer to the chart below.

Number on this TV	Corresponding cable TV channel
1	A-8
5	A-7
6	A-6
14	A
15	B
16	C
17	D
18	E

101	W+60
102	W+61
...	...
123	W+82
124	W+83
125	W+84

* This designation of cable TV channels conforms to the EIA/NCCTA recommendation. Check with your local cable TV company for more complete information on the available channels.

1-4. ADJUSTING PICTURE QUALITY

To increase brightness	To decrease brightness	To increase color intensity	To decrease color intensity	Skin tones become greenish	Skin tones become purplish	To increase picture contrast	To decrease picture contrast
BRIGHT		COLOR		HUE		PICTURE	

1-5. USING OTHER CONVENIENT FEATURES

Muting the sound

Press MUTE to mute the TV sound.

To turn muting off

Press MUTE again, or VOL +.

Setting the sleep timer

Press SLEEP to set the TV to turn off in the amount of time you choose. Each time you press SLEEP, the time increments 30, 60 and 90 are selected in sequence.

The "SLEEP" display (red) will appear 1 minute before the TV turns off.

To turn the sleep timer off

Press SLEEP once more after 90.

Displaying the input mode

Press DISPLAY. The current input modes (channel, TV/VIDEO) will be displayed on the screen.

To turn the display off

Press DISPLAY again.

(TV mode)

1-6. CONNECTING VIDEO EQUIPMENT

Switching quickly between 2 channels

Press JUMP once to recall the channel you were watching previously; press JUMP again to switch back. Use this feature to keep track of two programs alternately.

Listening through an earphone

You can listen to the TV's sound through an optional earphone connected to an earphone jack.

Connecting a VCR or 8mm video camera

Before connecting, turn off the power on all equipment.

Watching a VCR picture

- 1 Turn on the TV.

- 2 Press the TV/VIDEO button on the TV or the Remote Commander so that "VIDEO" appears on the screen.

To return to TV mode

Press the TV/VIDEO button on the TV or the Remote Commander so that a channel number appears on the screen.

Connecting two VCRs for tape editing

Notes

- Move the VCR away from the TV, if the display or sound is affected.
- For operating instructions, refer to the instruction manual furnished with the VCR.

SECTION 2 DISASSEMBLY

2-1. COVER REMOVAL

NOTE : Follow the disassembly procedure in the numerical over given.

2-2. SPEAKER AND F BOARD REMOVAL

2-3. D BOARD REMOVAL

2-4. SERVICE POSITION

2-5. PICTURE TUBE REMOVAL

Before replacing the CRT, use the DGC holder for the CRT as shown in the illustration, and wind the DGC.

Note : Short circuit the anode of the picture tube and the anode cap to the metal chassis, CRT shield, or carbon painted on the CRT, after removing the anode.

• REMOVAL OF ANODE-CAP • REMOVING PROCEDURES

① Turn up one side of the rubber cap in the direction indicated by the arrow ①.

② Using a thumb pull up the rubber cap firmly in the direction indicated by the arrow ②.

③ When one side of the rubber cap is separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling up it in the direction of the arrow ③.

• HOW TO HANDLE AN ANODE-CAP

- ① Don't hurt the surface of anode-caps with sharp shaped material!
- ② Don't press the rubber hardy not to hurt inside of anode-caps!
A material fitting called as shatter-hook terminal is built in the rubber.
- ③ Don't turn the foot of rubber over hardy!
The shatter-hook terminal will stick out or hurt the rubber.

SECTION 3 SET-UP ADJUSTMENTS

- The following adjustments should be made when a complete realignment is required or a new picture tube is installed.
- These adjustments should be performed with rated power supply voltage unless otherwise noted.

The controls and switch should be set as follows unless otherwise noted :

PICTURE control..... normal
BRIGHTNESS control..... normal

Perform the adjustments in order as follows:

1. Beam Landing
2. Convergence
3. Focus
4. Screen (G 2) and White Balance

Note: Test Equipment Required.

1. Color bar Pattern Generator
2. Degausser
3. DC Power Supply
4. Digital multimeter

Preparation:

- Feed in the white pattern signal.
- Before starting, degauss the entire screen.

3-1. BEAM LANDING

1. Input a raster signal with the pattern generator.
2. Loosen the deflection yoke mounting screw, and set the purity control to the center as shown in Fig.2
3. Turn the raster signal of the pattern generator to green.
4. Move the deflection yoke backward, and adjust with the purity control so that green is in the center and red and blue are at the sides evenly. (Fig.3)
5. Move the deflection yoke forward, and adjust so that the entire screen becomes green. (Fig.1)
6. Switch over the raster signal to red and blue and confirm the condition.
7. When the position of the deflection yoke is determined, tighten it with the deflection yoke mounting screw.
8. When landing at the corner is not right, adjust by using the disk magnets. (Fig.4)

Fig.2

Fig.3

Fig.1

Fig.4

3-2. CONVERGENCE

Preparation:

- Before starting, perform FOCUS, H.SIZE, V.LIN and V.SIZE adjustments.
- Set BRIGHTNESS control to minimum.
- Feed in dot pattern.

(1) Horizontal and Vertical Static Convergence

Fig.5

1. Adjust H.STAT VR to converge red, green and blue dots the in center of the screen.(Horizontal movement)
 2. Adjust V. STAT magnet to converge red, green and blue dots in the center of the screen. (Vertical movement)
 3. If the red, green and blue dots do not converge on the center of screen with H.STAT VR, perform horizontal convergence adjustment using H.STAT VR and V.STAT magnet as shown below. (In this case, H.STAT VR and V.STAT magnet effect each other.)
- Tilt the V.STAT magnet and adjust static convergence to open or close the V.STAT magnet.

4. When the V.STAT magnet is moved in the direction of arrow ㉓ and ㉔, red, green and blue dots move as shown below.

* IF the red and green dots do not coincide with blue dot, adjustment with BMC (6-poles) magnet.

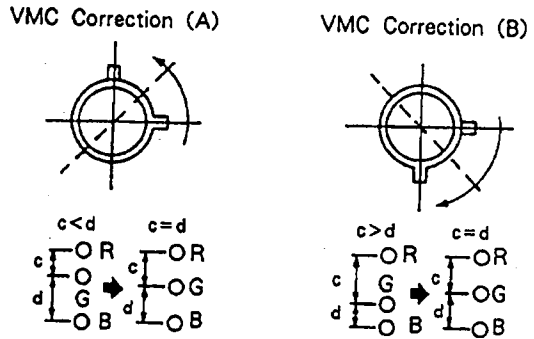

Fig.6

● HMC and VMC correction for BMC (6-pole) magnet.

1. HMC (Horizontal Misconvergence) correction and motion of the Electron Beam with the BMC (6-poles) magnet.

2. VMC (Vertical Misconvergence) correction and motion of the Electron Beam with the BMC (6-poles) magnet.

(2) Dynamic Convergence Adjustment

Preparation:

● Before starting perform Horizontal and Vertical static convergence Adjustment.

1. Slightly loosen deflection yoke screw.
2. Remove deflection yoke spacers.

3. Move the deflection yoke for best convergence as shown below.

4. Tighten the deflection yoke screw.
5. Install the deflection yoke spacers.

(3) Screen-corner Convergence

Fig.8

3-3. FOCUS

Adjust FOCUS control (FBT) for best picture.

FRYBACK

Fig.9

3-4. SCREEN(G 2) and WHITE BALANCE

Fig.10

[SCREEN(G2)]

1. Input a dots pattern.
2. Set the PIC, BRT controls at minimum and COLOR control at normal.
3. Adjust BKG VRs (RV 701, RV 703 and RV 705) so that voltages on the red, green and blue cathodes are 100 V dc with an oscilloscope as shown in Fig.11.
4. Observe the screen and adjust SCREEN VR (FBT) to obtain the faintly visible background of dot signal.

Fig.11

[WHITE BALANCE]

1. Receive a all white signal using a pattern generator.
2. Set the PIC control to minimum and set the BRT control at normal.
3. Adjust BKG controls (VR701, 703, 705)for best white balance.
4. Set the PICTURE control to maximum. Observe the screen and adjust the DRIVE controls (VR 702, 704) for best white balance.
5. Repeat steps 3 and 4.

SECTION 4

SAFETY RELATED ADJUSTMENTS

☒ R879, R840, CONFIRMATION METHOD (HOLD-DOWN CONFIRMATION) AND READJUSTMENT

The following adjustment should be performed when replacing the following components.

(Marked with ☒ on the schematic diagram)

R 240, R 814, R 879, R 840, D 805, C 812, C 825

1. Receive a color bar signal.
2. Set the picture volume and brightness at center click position.
3. Confirm that 16 V DC voltage is output to TP 101 on A board.
4. Next, apply 19.3 V DC external voltage to TP 101 and confirm that it hold down.
5. When step 4 is not satisfied, readjustment should be performed by altering the resistance value of R 879 and R 840. (D board marked with ☒)

☒ R662, VR 651, B+ VOLTAGE CONFIRMATION AND ADJUSTMENT

The following adjustment should be performed when replacing the following components.

(Marked with ☒ on the schematic diagram)

R 660, R 661, R 662, R 665, VR 651, IC 652

1. Set the power source to 120 V \pm 5% AC.
2. Receive a color bar signal.
3. Set the picture volume and brightness at the center click position.
4. Adjust VR 651 (30 V ADJ), then adjust the +B power source. At this time, confirm that the power is 30.3 \pm 0.1 V DC. (TP 651 on A board)
5. When step 4 is not satisfied, readjustment should be performed by altering the resistance value of R 662 and VR 651. (D board marked with ☒)

CONFIRMATION AFTER REPLACING FBT

Confirm that 16 V \pm 1 V DC voltage is output to TP 101 when replacing the flyback transformer.

SECTION 5 CIRCUIT ADJUSTMENTS

5-1. A BOARD ADJUSTMENTS

RF AGC ADJUSTMENT (VR 111)

1. Receive an off-air signal.
2. Adjust VR111 so that snow noise and cross-modulation just disappear the picture.

CHANNEL DISPLAY POSITION ADJUSTMENT (VR 101)

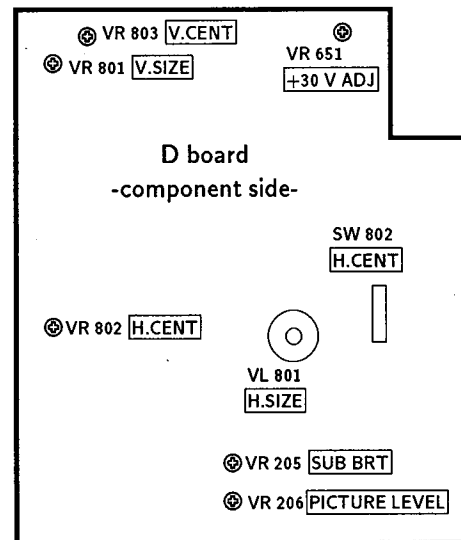

1. Adjust VR101 so that CHANNEL display position comes to the position shown in the figure.

AUDIO ADJUSTMENT (VR 112)

1. Receive a broadcast signal.
2. Adjust VR 112 so that the sound become optimum with minimum distortion.

5-2. D BOARD ADJUSTMENTS

PICTURE LEVEL ADJUSTMENT (VR 206)

1. Receive a color bar signal.
2. Set the picture and brightness VR at center click position.
3. Connect an oscilloscope to the red output on the C board.
4. Adjust VR 206 so that the balance of the black and white level becomes 49 Vp-p.

SUB-BRIGHTNESS ADJUSTMENT (VR 205)

1. Receive a color bar signal.
2. Set the picture to MIN and brightness at the center click position.
3. Adjust VR 305 so that the blue section becomes slightly brighter.

VL 801 H.SIZE (HORIZONTAL SIZE)

SW802, VR802 H.CENT (HORIZONTAL CENTER)

VR 801 V.SIZE (VERTICAL SIZE)

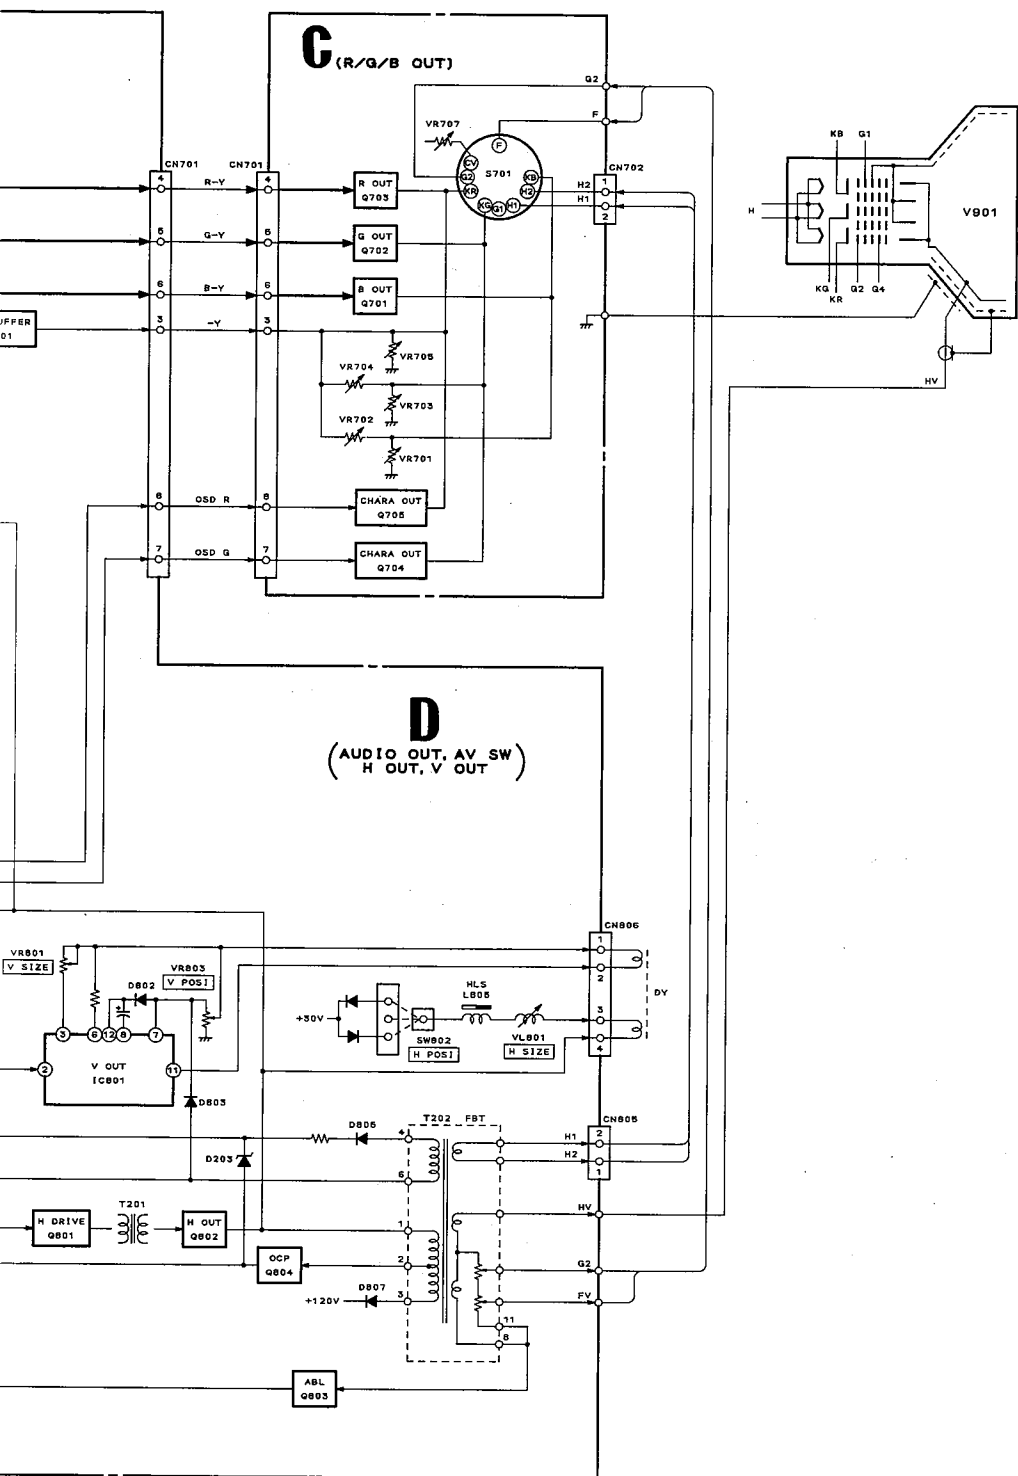

VR 803 V.CENT (VERTICAL CENTER)

+B ADJUSTMENT (VR 651)

1. Adjust VR 651 (30 V ADJ) so that TP 651 is 30.3 ± 0.1 V DC.

6-2. CIRCUIT BOARDS LOCATION

6-3. PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS

D AUDIO OUT, AV SW,
H OUT, V OUT

Note: The components identified by shading and mark  are critical for safety. Replace only with part number specified.

Note: Les composants identifiés par une trame et par une marque  sont d'une importance critique pour la sécurité. Ne les remplacer que par des pièces de numéro spécifié.

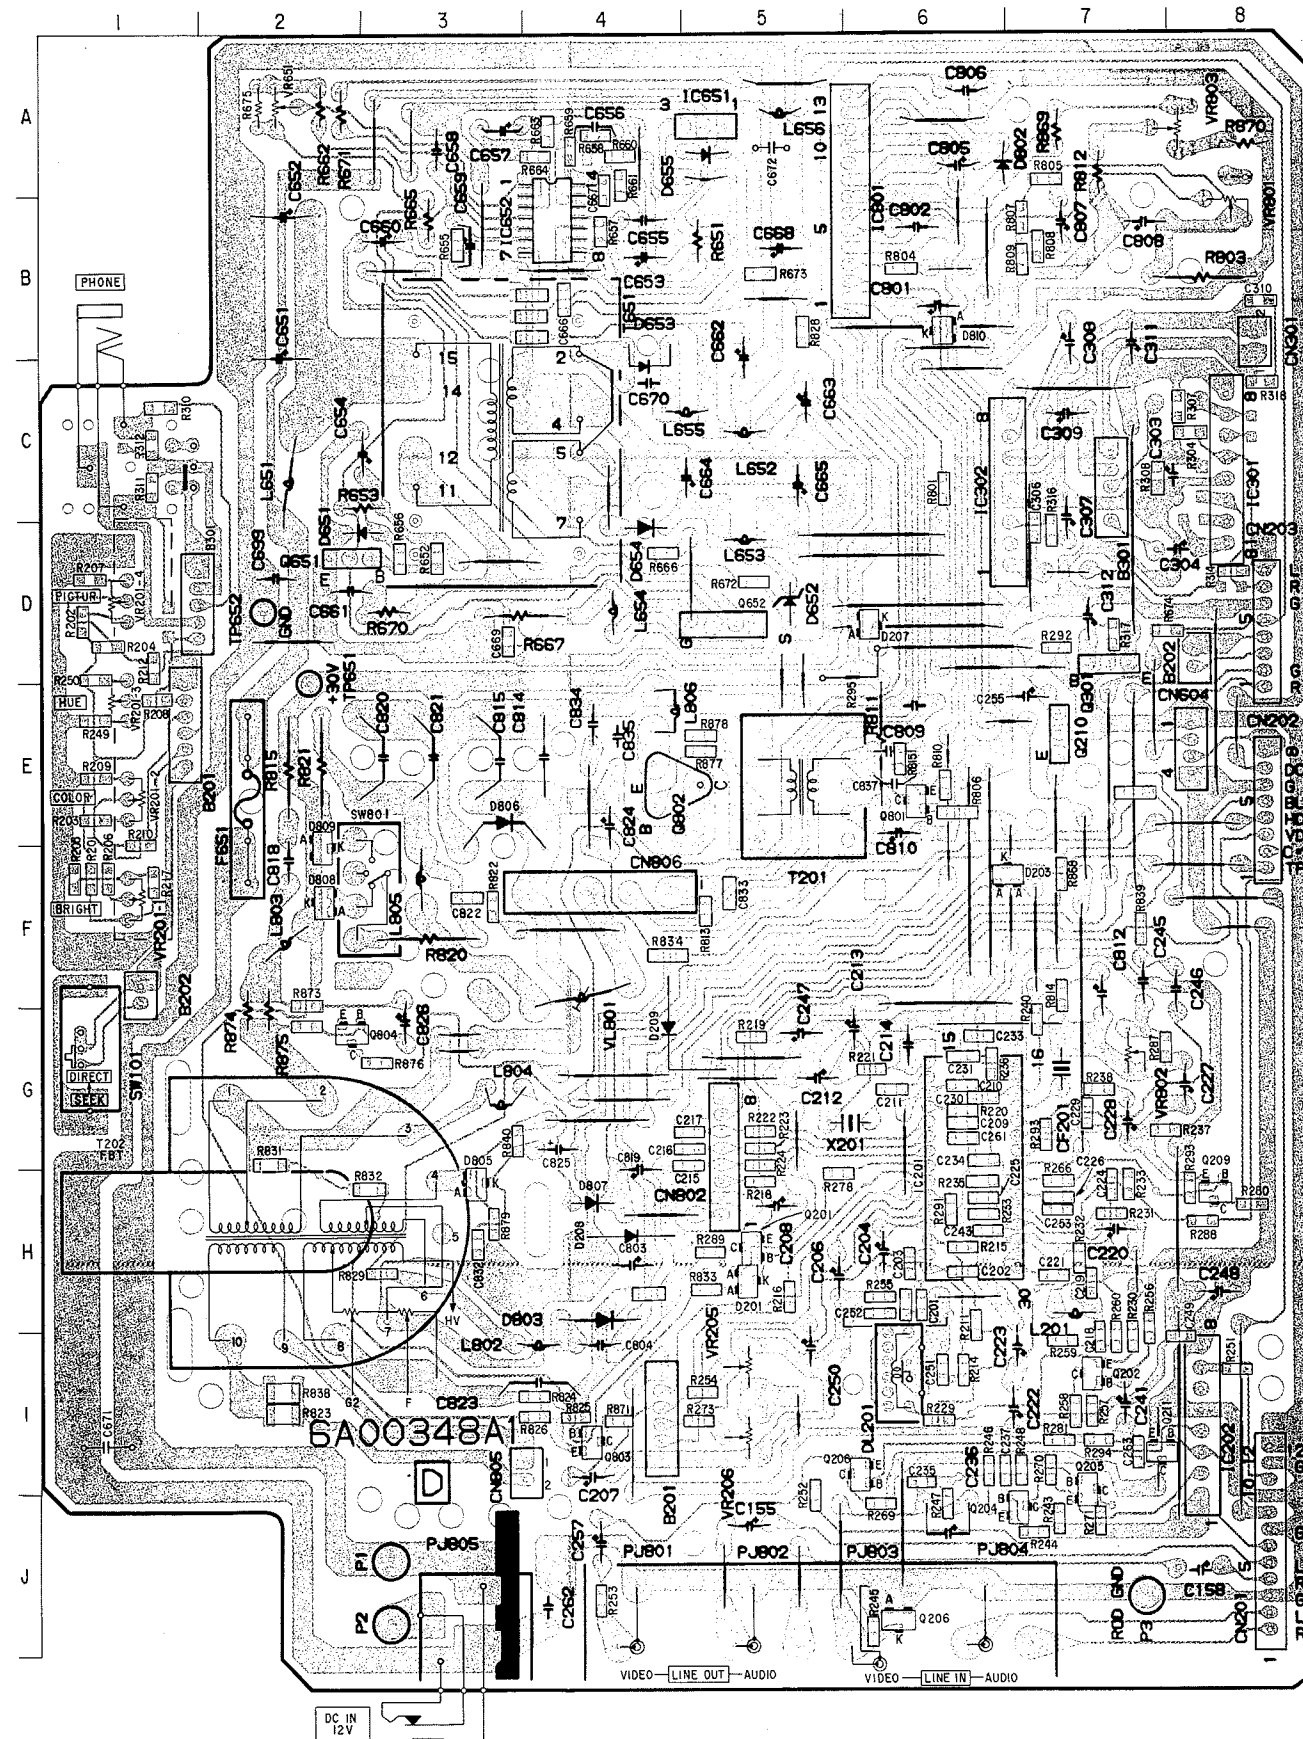

Note:

- All capacitors are in μF unless otherwise noted. pF: μF 50 WV or less are not indicated except for electrolytic and tantalums.
 - All resistors are in ohms. $\text{k}\Omega = 1000\Omega$, $\text{M}\Omega = 1000\text{K}\Omega$
 - All resistors are in ohms, 1/10W unless otherwise noted. $\text{k}\Omega : 1000\Omega$, $\text{M}\Omega : 1000\text{K}\Omega$
 -  : nonflammable resistor.
 -  : internal component.
 -  : panel designation.
 - All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
 -  : primary earth
 - The components identified by  in this manual have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.
 - When replacing components identified by  mark the necessary adjustments indicated. If results do not meet the specified value, change the component identified by  and repeat the adjustment until the specified value is achieved. (Refer to R840, R879, R662 and VR651 adjustment on page 21 - 22)
- When replacing the part in below table, be sure to perform the related adjustment.

Part replaced ()	Adjustment ()
R240, R814, R840, R879, D805, C812, C825	R840, R879 (HV HOLD DOWN)
R660, R661, R662, R665, VR651, IC652	R662, RV651 (+B MAX)

- Readings are taken with a color-bar signal input.
- no mark: VHF IN
- Readings are taken with a 10M Ω digital multimeter.
- Voltage are dc with respect to ground unless otherwise noted.
- Voltage variations may be noted due to normal production tolerances.
- All voltages are in V.
- Circled numbers are waveform references.
-  : B+ bus.
-  : signal path.
-  : adjustment for repair or semiconductor function.

CAUTION
When talking a broken fuse (F603) off, discharge across C614 to avoid shock hazard.

CAUTION

This set is equipped with a polarized ac power cord plug (one blade of the plug is wider than the other). When replacing the ac power code, be sure to connect it with specified part number as shown in this diagram.

SECTION 8 ELECTRICAL PARTS LIST

A

NOTE:

The components identified by shading and mark **Δ** are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque **Δ** sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

• Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

• All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

RESISTORS

• All resistors are in ohms.
• F: Nonflammable

When indicating parts by reference number, please include the board name.

CAPACITORS

• MF: μ F, PF: μ MF

COILS

• MMH: mH, UH: μ H

• The components identified by **Δ** in this manual have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.

• The components identified by **■** in this manual have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.

The components identified by shading and mark Δ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.
